

Faster Check-In While Protecting Your Airline from Litigation!

Your airline could be liable to pay deportation and associated legal costs!

IDentiFLY is a fully portable check-in system that scans and saves up to 3 documents per passenger.

- Scanning uses ultraviolet, infrared and holographic technologies.
- Flight crews can be provided with document copies via thumb drive for use at destination.
- Images are maintained in a central repository for corporate access if needed later.

Protect your airline with an integrated audit trail.

- The following entries are maintained:
 - All vetting responses from each passenger
 - When a passenger has been marked as selectee
 - The initials of the gate agent who processed the passenger and issued the boarding pass
- Passengers can be marked for additional screening even if not on a watch list

Faster Check-In, Shorter Lines, and Smoother Customer Experience!

- Gate agents can be comfortably using the system with 10-15 minutes of training.
- As the system populates the passenger information screen, documents are immediately scored for pass or fail.
- Failures are instantly displayed in a separate window.
- Integration with IATA Timatic (coming soon) informs the gate agent which travel documents are required based on transit points, country of residence or destinations.
